

Python aberraciones

- operador ternario:

```
variable = "valor" if condicion_cierta() else "otro_valor"
```

- reducciones:

```
my_numbers = [11, 12, 13, 14, 15, 16, 17, 18, 19, 20]  
even_number_list = [num for num in my_numbers if num%2 == 0]
```
