sesión 13

Container Orchestration Rosetta Stone

	unidad mínima	Gestor de disponibilidad controllers	expose services	webservices exterior
Swarm	contenedor	Docker Service		
K8S	pod	~~Replication Controller~~ ReplicaSet DaemonSet StatefulSet	HostPort LoadBalancer	LoadBalancer Ingress

- controllers
  - Deployments = POD + ReplicaSet
  - Jobs = 1 sola ejecución
  - CronJob
- services
  - hostport : exponer en el host a través de un puerto
  - clusterIP : uso interno del cluster
  - loadbalancer :
  - externalname : definimos el mismo nombre en el servicio en diferentes namespaces, ex: oracle (dev/pre/pro)
- webservices (acceso exterior):
  - Loadbalancer
  - ingress : trabaja en kube-system, pero expone de cualquier namespace (podría usarse para hacer hablar PODs de diferentes namespaces)
  - nginx+ssl, traefik

lab

levantar docker swarm cluster, desplegar Portainer y ELK

portainer.yaml

```
version: '3.4'

services:
  portainer:
    image: portainer/portainer
    command: '-H "tcp://tasks.agent:9001" --tlsskipverify'
    ports:
      - ${PUBLIC_PORT}:9000
    networks:
      - proxy
      - portainer_agent
    volumes:
      - /var/run/docker.sock:/var/run/docker.sock
      - ${REMOTE_MOUNT}/${STACK_NAME}/portainer/data:/data
    deploy:
      mode: replicated
      replicas: 1
      labels:
```

```
        traefik.port: 9000
        traefik.frontend.rule: "Host:${FQDN}"
        traefik.docker.network: 'proxy'
      placement:
        constraints: [node.role == manager]
  agent:
    image: portainer/agent
    environment:
      AGENT_CLUSTER_ADDR: tasks.agent
    volumes:
      - /var/run/docker.sock:/var/run/docker.sock
    ports:
      - target: 9001
        published: 9001
        protocol: tcp
        mode: host
    networks:
      - portainer_agent
    deploy:
      mode: global
      placement:
        constraints: [node.platform.os == linux]

networks:
  portainer_agent:
    external: true
  proxy:
    external: true
```

elk.yaml

```
#       Docker Stack to deploy ELK + Logspout
#       Based on .......
#       Updated by: Kenneth Peiruza, kenneth@floss.cat
#       Sun Mar  4 13:15:47 CET 2018
#
#      cluster.name: 'docker-cluster'
#      bootstrap.memory_lock: 'true'
version: '3.4'

services:
  elasticsearch:
    image: docker.elastic.co/elasticsearch/elasticsearch-oss:6.2.2
    environment:
      ES_JAVA_OPTS: '-Xms768m -Xmx768m'
