

sesión 14 OpenStack

openstack

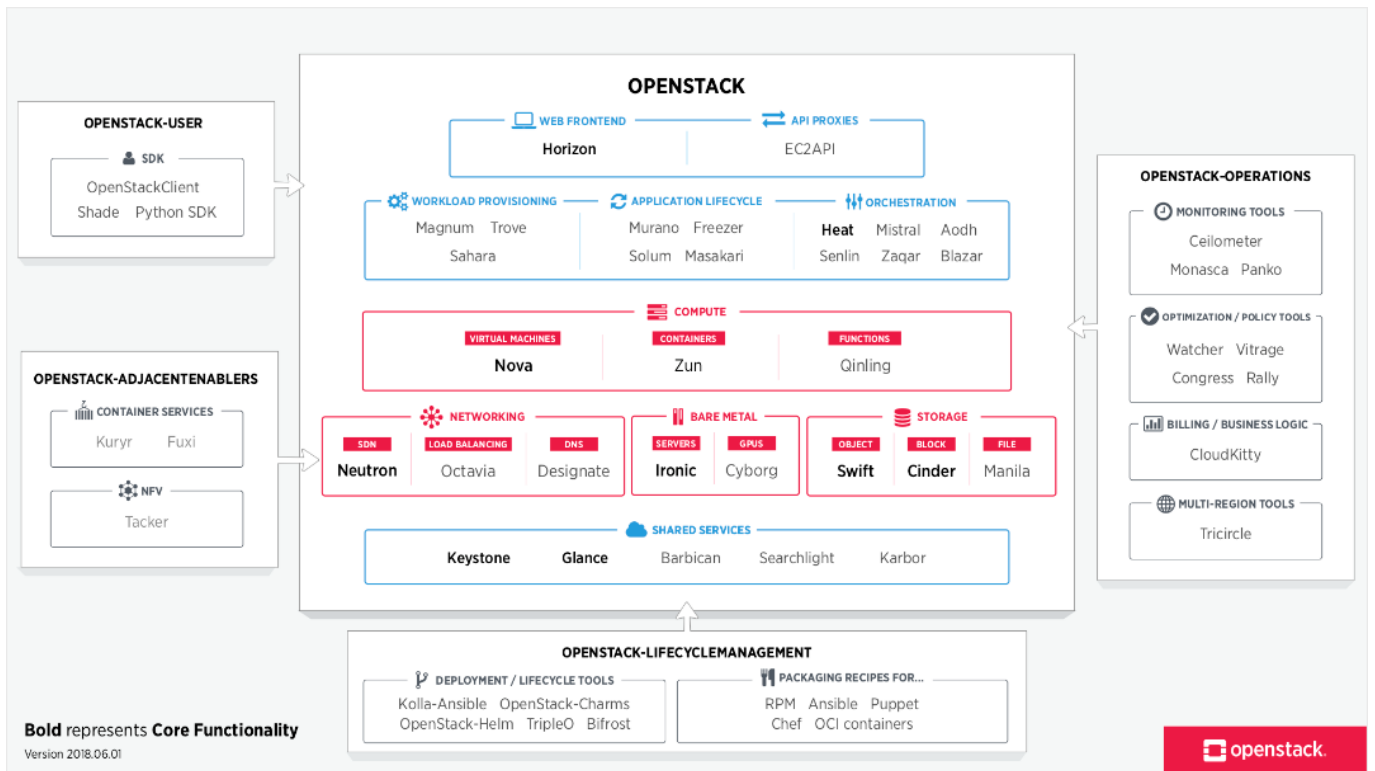

intro

- https://wiki.openstack.org/wiki/Main_Page
- **Trove** : Database as a Service
- **Zaquer** : rabbit openstack + broadcast
- **Swift** : aka S3
 - opensource S3 (interfaz) : <https://min.io/> → mockups S3 (aunque funciona como producto por si mismo)

composición

- han personalizado los diferentes servicios
 - destacat: Nova y Neutron
 - <https://www.openstack.org/software>

- Object Store
 - RBD (block device)
 - ceph <https://ceph.com/> (concurrency)
 - storage distribuido, raid

instalación

- apt install openstack-deploy
- dpkg -L openstack-deploy | grep bin/

google cloud

- <https://kubernetes.github.io/ingress-nginx/user-guide/monitoring/>
- <https://cloud.google.com/monitoring/kubernetes-engine/prometheus>

otros

- hostname -fqdn → /etc/hosts
- mysql:

```
USE mysql;  
SELECT * FROM USER;  
CREATE USER 'root'@'%' IDENTIFIED BY 'admin123';  
GRANT ALL privileges ON *.* TO 'root'@'%';  
FLUSH privileges;
```
