

Ethical Hacker : sesión 3

- [Ethical Hacker : sesión 3](#)

clase

- Modulo 09 - Ingenieria social
- Modulo 10 - Denegación de servicio
- Modulo 11 - Session Hijacking
- Modulo 12 - Evadiendo IDS, cortafuegos y honeypots
- Modulo 13 - Ataques a servidores web

Modulo 09 - Ingenieria social

- el ser humano es el eslabón más débil de la ciberseguridad

sección 2

- suplantación: hacerse pasar por alguien
 - <https://github.com/g0njxa/cazandophishing>
- vishing: suplantación por voz
- Eavesdropping: escuchar conversaciones no autorizadas
- Shoulder surfing: mirar por encima del hombro
- Dumpster Diving: bucear en la basura
- Reverse Social Engineering
- Piggybacking: llorar a alguien de dentro para que te abra
- Tailgating: colarme en un turno pasando junto a otro
- Diversion Theft: robo por descuido
- Honey Trap: persona atractiva
- Baiting: cebo con malware (USB)
- Quid Pro Quo: hacerse pasar por empleado de la empresa
- Elicitation: sacar información a través de una conversación

sección 3

- Phising
 - spear: dirigido a persona o personas
 - whaling: a más gente que el anterior
 - pharming: cosechar, manipular web o crear una falsa
 - spimming: mensajería instantanea
- tools:
- Otras técnicas..
- Deepfake
- Ocultar / falsear URLs
 - https://es.wikipedia.org/wiki/Nombre_de_dominio_internacionalizado
 - No usar Let's Encrypt
 - Punycode
 - caracter unicode para cambiar sentido escritura
 - \u202E

- <https://unicode-table.com/es/202E/> - Caracter Unicode que invierte el sentido de escritura de lo que venga a continuación
- <https://blog.segu-info.com.ar/2020/08/el-phishing-utiliza-texto-invisible-y.html> - Poner texto al revés, y con el carácter Unicode anterior, mostrarlo bien. Pero los analizadores de texto, ven el texto al revés.
- <https://symbl.cc/es/unicode/blocks/general-punctuation/#subblock-202A> - Otros caracteres que hacen algo parecido. Para poner caracteres unicode en Linux, en la línea de comandos, es con Shift+Ctrl+U y luego el código: u2764 → ♥
- <https://browserling.com> - navegar simulando ser un OS
- <https://www.getlinkinfo.com> - desacortador URLs
- <https://www.thispersondoesnotexist.com/>
- QRJacking

sección 5

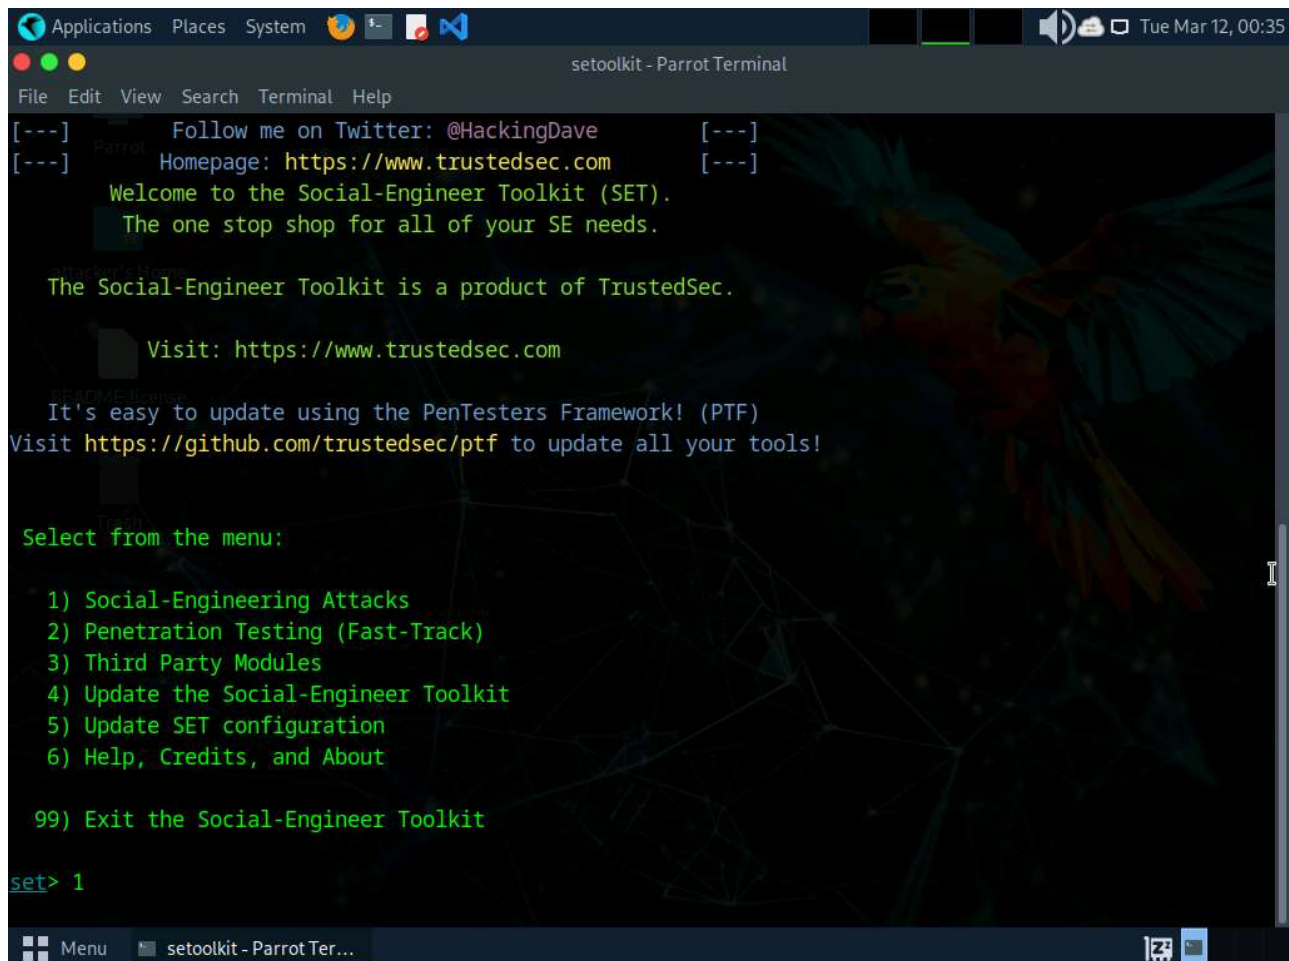

- AntiPhising Toolbar
 - netcraft
- Phishtank
- OhPhish - simular campaña phishing

Lab Module 09: Social Engineering

Lab 1: Perform Social Engineering using Various Techniques

Task 1: Sniff Credentials using the Social-Engineer Toolkit (SET)

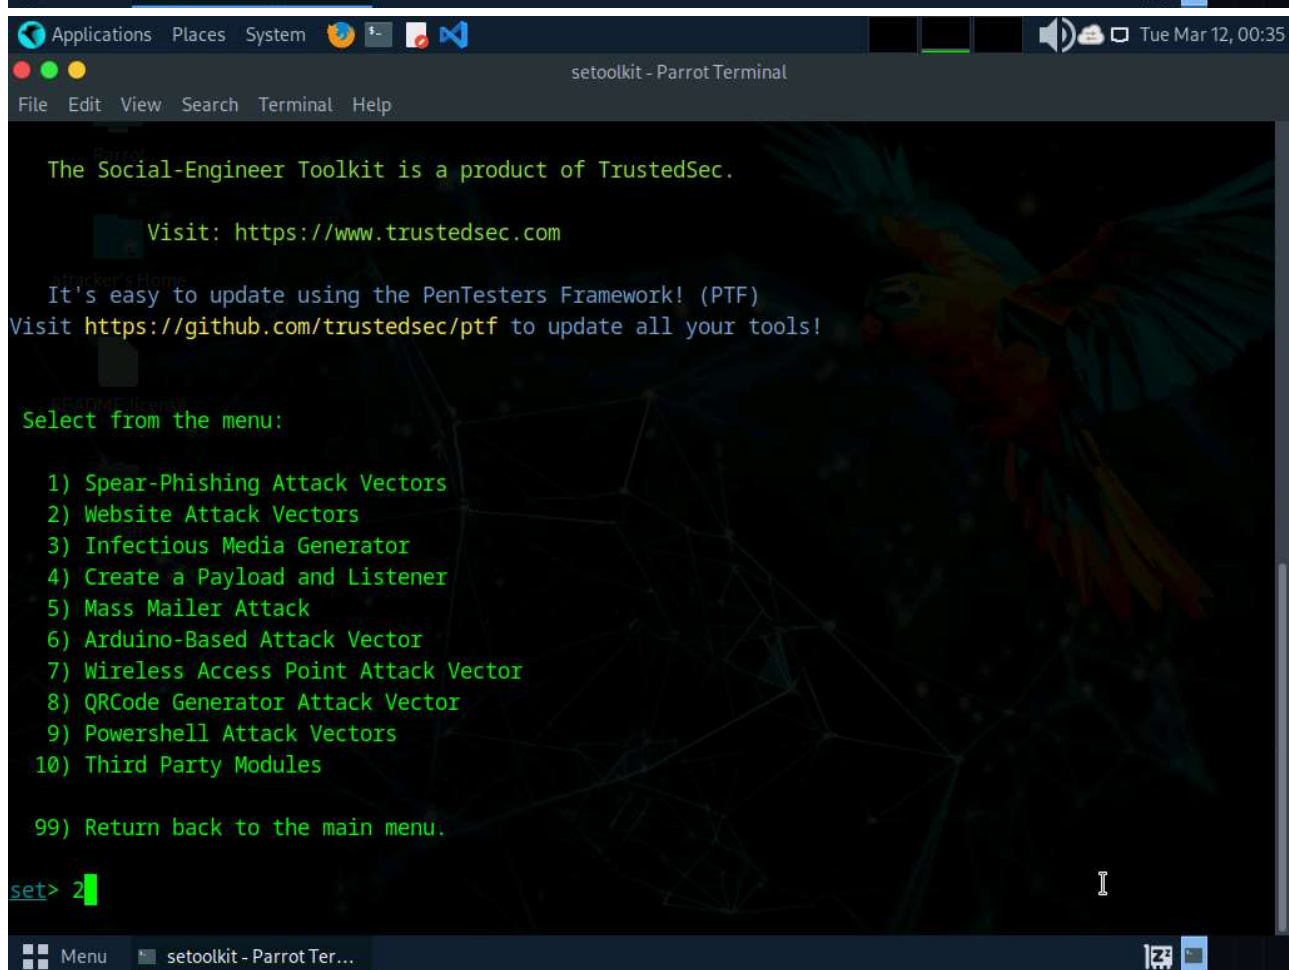

- setoolkit to launch Social-Engineer Toolkit.

The screenshot shows the Social-Engineer Toolkit (SET) main menu in a Parrot Terminal window. The window title is "setoolkit - Parrot Terminal". The menu is displayed in green text on a dark background with a parrot illustration. The menu options are:

- 1) Social-Engineering Attacks
- 2) Penetration Testing (Fast-Track)
- 3) Third Party Modules
- 4) Update the Social-Engineer Toolkit
- 5) Update SET configuration
- 6) Help, Credits, and About
- 99) Exit the Social-Engineer Toolkit

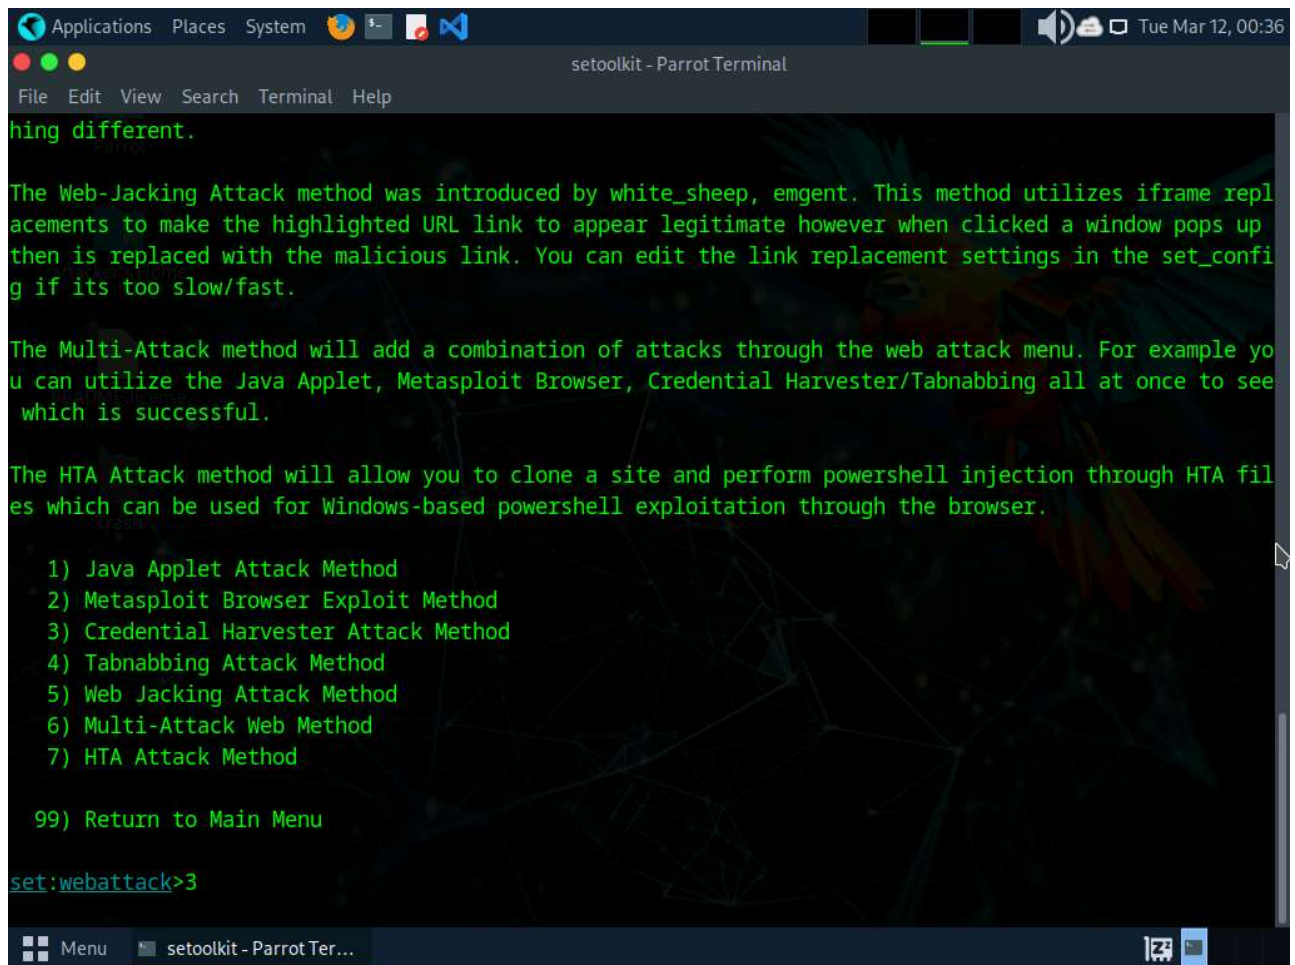

The user has entered "set> 1" at the prompt.

The screenshot shows the Social-Engineer Toolkit (SET) sub-menu for Social-Engineering Attacks in a Parrot Terminal window. The window title is "setoolkit - Parrot Terminal". The menu is displayed in green text on a dark background with a parrot illustration. The menu options are:

- 1) Spear-Phishing Attack Vectors
- 2) Website Attack Vectors
- 3) Infectious Media Generator
- 4) Create a Payload and Listener
- 5) Mass Mailer Attack
- 6) Arduino-Based Attack Vector
- 7) Wireless Access Point Attack Vector
- 8) QRCode Generator Attack Vector
- 9) Powershell Attack Vectors
- 10) Third Party Modules
- 99) Return back to the main menu.

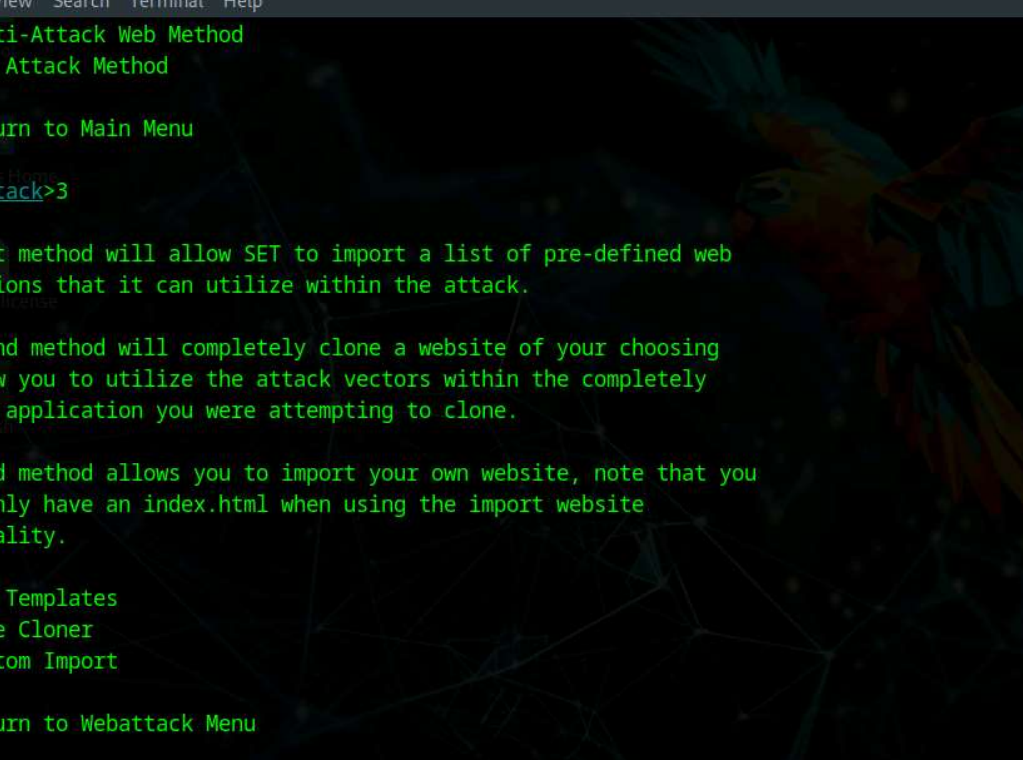

The user has entered "set> 2" at the prompt.

The screenshot shows a terminal window titled "setoolkit - Parrot Terminal" within a desktop environment. The terminal displays the following text:

```
hing different.  
The Web-Jacking Attack method was introduced by white_sheep, emgent. This method utilizes iframe replacements to make the highlighted URL link to appear legitimate however when clicked a window pops up then is replaced with the malicious link. You can edit the link replacement settings in the set_config if its too slow/fast.  
The Multi-Attack method will add a combination of attacks through the web attack menu. For example you can utilize the Java Applet, Metasploit Browser, Credential Harvester/Tabnabbing all at once to see which is successful.  
The HTA Attack method will allow you to clone a site and perform powershell injection through HTA files which can be used for Windows-based powershell exploitation through the browser.  
1) Java Applet Attack Method  
2) Metasploit Browser Exploit Method  
3) Credential Harvester Attack Method  
4) Tabnabbing Attack Method  
5) Web Jacking Attack Method  
6) Multi-Attack Web Method  
7) HTA Attack Method  
99) Return to Main Menu  
set:webattack>3
```

The terminal window has a menu bar with "File", "Edit", "View", "Search", "Terminal", and "Help". The desktop background is dark with a network diagram pattern. The system tray at the bottom right shows the date and time as "Tue Mar 12, 00:36".

The screenshot shows a terminal window titled "setoolkit - Parrot Terminal". The terminal displays the following content:

```

6) Multi-Attack Web Method
7) HTA Attack Method

99) Return to Main Menu

set:webattack>3

The first method will allow SET to import a list of pre-defined web
applications that it can utilize within the attack.

The second method will completely clone a website of your choosing
and allow you to utilize the attack vectors within the completely
same web application you were attempting to clone.

The third method allows you to import your own website, note that you
should only have an index.html when using the import website
functionality.

1) Web Templates
2) Site Cloner
3) Custom Import

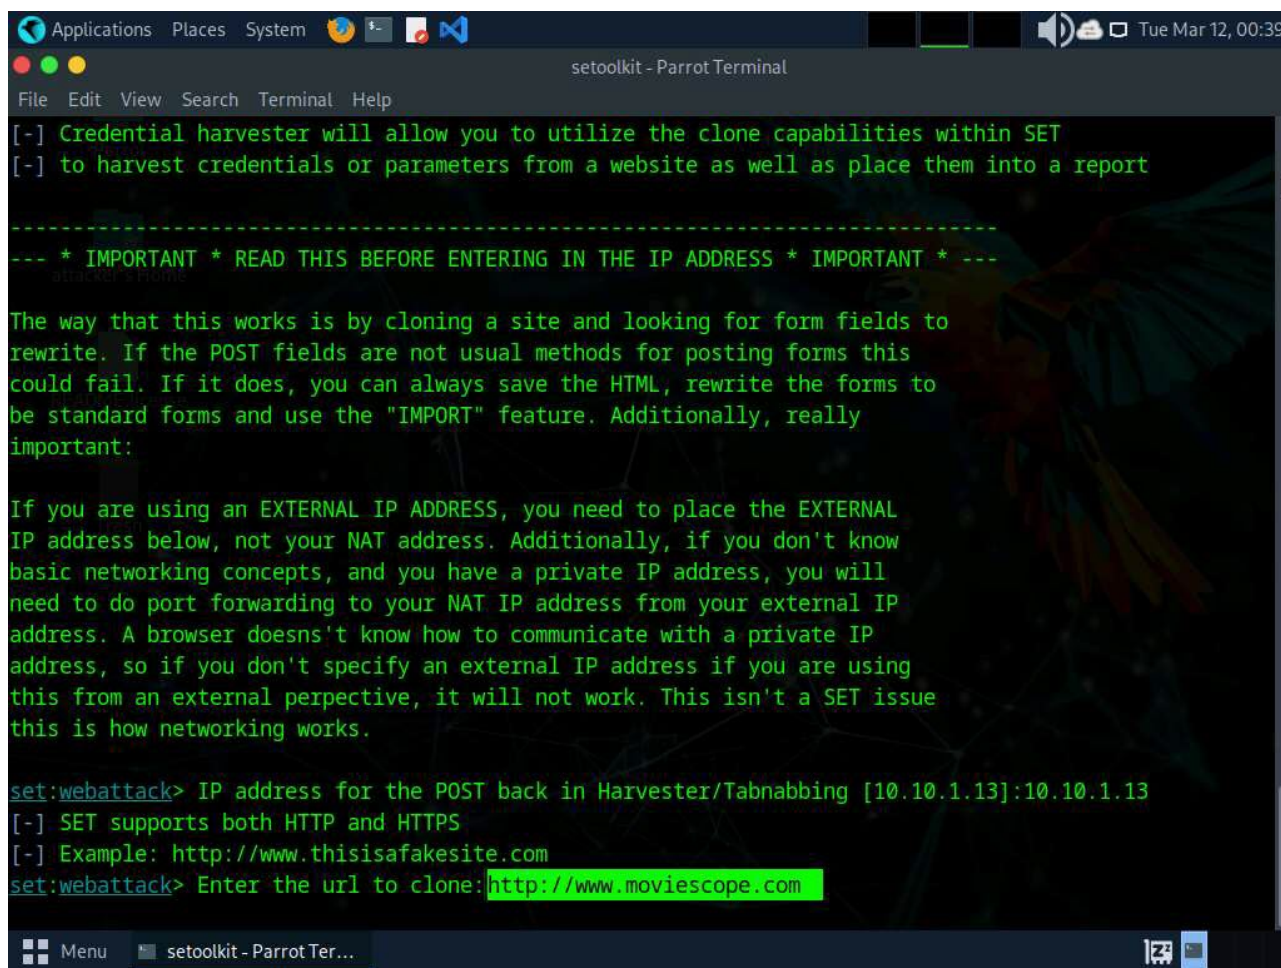

99) Return to Webattack Menu

set:webattack>2

```

The terminal background features a dark theme with a faint, stylized image of a parrot and a network diagram. The top of the window shows the Parrot OS desktop environment with various application icons and system status information (Tue Mar 12, 00:37).

- IP máquina host
- URL a clonar

The screenshot shows a terminal window titled "setoolkit - Parrot Terminal" with a menu bar (File, Edit, View, Search, Terminal, Help). The terminal displays the following text:

```
[ - ] Credential harvester will allow you to utilize the clone capabilities within SET
[ - ] to harvest credentials or parameters from a website as well as place them into a report

-----
--- * IMPORTANT * READ THIS BEFORE ENTERING IN THE IP ADDRESS * IMPORTANT * ---
attacker's home

The way that this works is by cloning a site and looking for form fields to
rewrite. If the POST fields are not usual methods for posting forms this
could fail. If it does, you can always save the HTML, rewrite the forms to
be standard forms and use the "IMPORT" feature. Additionally, really
important:

If you are using an EXTERNAL IP ADDRESS, you need to place the EXTERNAL
IP address below, not your NAT address. Additionally, if you don't know
basic networking concepts, and you have a private IP address, you will
need to do port forwarding to your NAT IP address from your external IP
address. A browser doesn't know how to communicate with a private IP
address, so if you don't specify an external IP address if you are using
this from an external perspective, it will not work. This isn't a SET issue
this is how networking works.

set:webattacker> IP address for the POST back in Harvester/Tabnabbing [10.10.1.13]:10.10.1.13
[ - ] SET supports both HTTP and HTTPS
[ - ] Example: http://www.thisisafakesite.com
set:webattacker> Enter the url to clone: http://www.moviescope.com
```

The terminal window has a taskbar at the bottom with a "Menu" button and a window title "setoolkit - Parrot Ter...".

```

Applications  Places  System  [Icons]  Tue Mar 12, 00:48
setoolkit - Parrot Terminal
File Edit View Search Terminal Help

important:
If you are using an EXTERNAL IP ADDRESS, you need to place the EXTERNAL
IP address below, not your NAT address. Additionally, if you don't know
basic networking concepts, and you have a private IP address, you will
need to do port forwarding to your NAT IP address from your external IP
address. A browser doesn't know how to communicate with a private IP
address, so if you don't specify an external IP address if you are using
this from an external perspective, it will not work. This isn't a SET issue
this is how networking works.

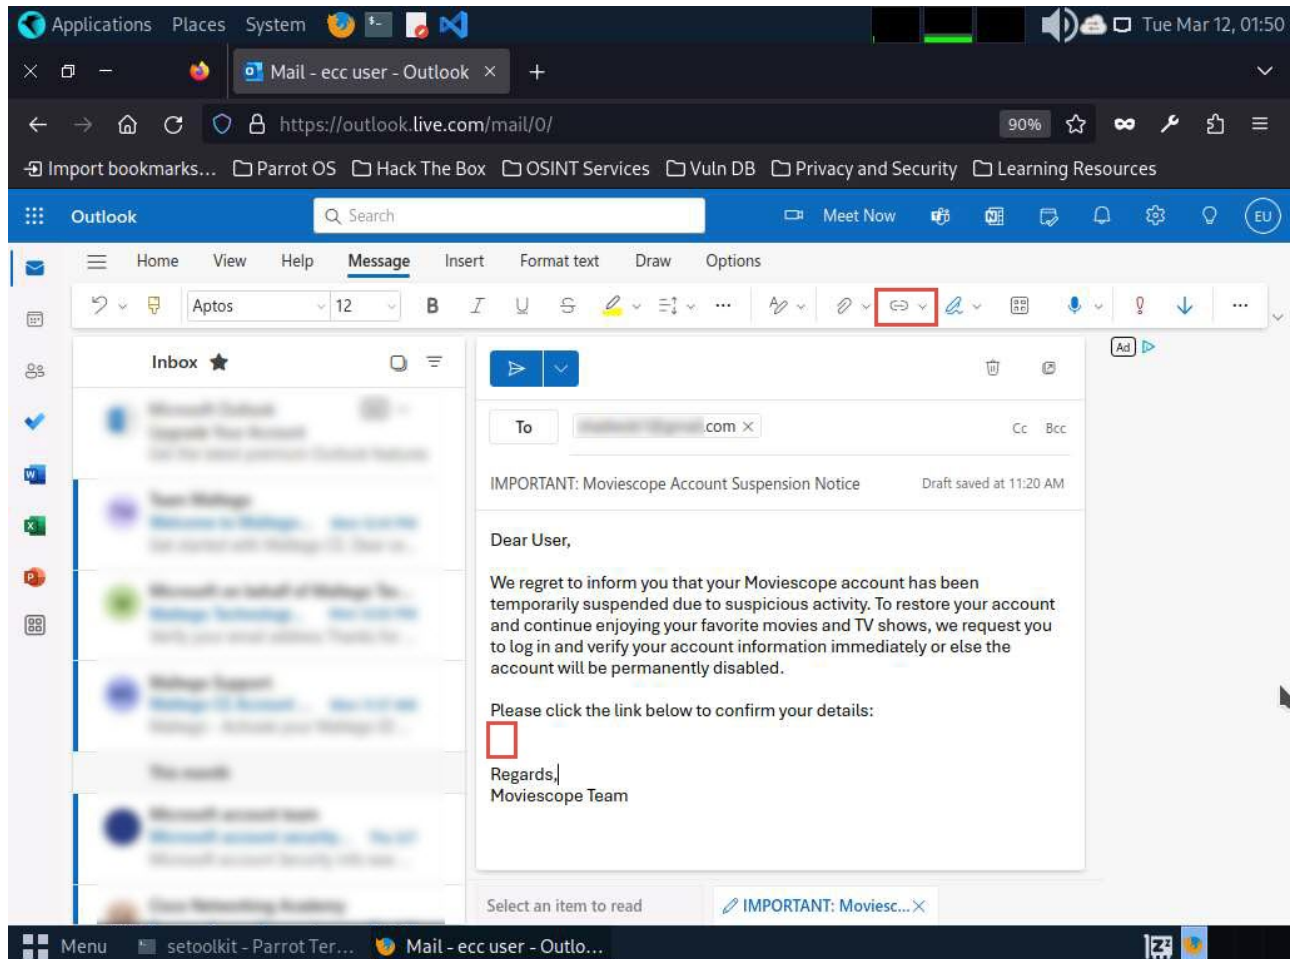

set:webattack> IP address for the POST back in Harvester/Tabnabbing [10.10.1.13]:10.10.1.13
[-] SET supports both HTTP and HTTPS
[-] Example: http://www.thisisafakesite.com
set:webattack> Enter the url to clone:http://www.moviescope.com

[*] Cloning the website: http://www.moviescope.com
[*] This could take a little bit...

The best way to use this attack is if username and password form fields are available. Regardless, this
captures all POSTs on a website.
[*] The Social-Engineer Toolkit Credential Harvester Attack
[*] Credential Harvester is running on port 80
[*] Information will be displayed to you as it arrives below:

```

- enviar la IP en un enlace simulando ser otra dirección

The image shows a web browser window and a terminal window. The browser window displays the 'MOVIESCOPE' login page. The address bar shows '10.10.1.13'. The login page has a navigation bar with links: Home, Features, Trailers, Photos, Blog, and Contacts. The main heading is 'Login'. Below it are input fields for 'Username:' and 'Password:', and a 'Login' button. The background of the page features a collage of movie-related items like a clapperboard, film reels, and popcorn.

The terminal window, titled 'setoolkit - Parrot Terminal', shows a series of HTTP requests to the target IP. The output indicates a successful login attempt. The following text is displayed in the terminal:

```
10.10.1.11 - - [12/Mar/2024 02:10:13] "GET /js/jquery.script.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET / HTTP/1.1" 200 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET /js/jquery.superfish.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET /js/jquery-ui.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET /js/jquery-ui.selectmenu.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET /js/jquery.flexslider-min.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET /js/jquery.min.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET /js/jquery.quicksand.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET /js/jquery.script.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:38] "GET /js/jquery.min.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:48] "GET /js/jquery.superfish.js HTTP/1.1" 404 -
10.10.1.11 - - [12/Mar/2024 02:13:58] "GET /js/jquery-ui.js HTTP/1.1" 404 -

```

Lab 2: Detect a Phishing Attack

- instalar plugin netcraft

Lab 3: Social Engineering using AI

Task 1: Craft Phishing Emails with ChatGPT

- prompts:
 - "Pose as an genuine Microsoft's customer support executive with imaginary name, write a concise mail stating that he/she has found suspicious login on user's account and ask then to reset the password on urgent basis. Provide the reset link at [Fake Reset Link]."
 - "Write an email from a company's IT administrator its employees letting them know that they need to install the latest security software. Provide a link where the employee can download the software. Let them know that all employees must complete the download by next Friday."
 - "Impersonate the Sam's writing style from the conversations given below and create a message for John saying that his father got massive heart attack today and he is in need of money so urging john for transferring

the required amount of money to his account on urgent basis. Here is the previous conversations between Sam and John on various topics Topic: Nature and Its Beauty John: Hey Sam, have you ever marveled at the beauty of nature? The way the sun paints the sky during sunset is just breathtaking, isn't it? Sam: The celestial orb's descent into the horizon provides a resplendent spectacle, casting an ethereal kaleidoscope of hues upon the atmospheric canvas. Nature's grandeur unveils itself in the cosmic ballet of light and shadow. John: Yeah, I guess so. I just love how the colors change, you know? It's like a painting in the sky. Sam: The chromatic metamorphosis, a transient masterpiece, orchestrates a symphony of spectral transitions, manifesting the ephemeral artistry inherent in the terrestrial firmament."

Modulo 10 - Denegación de servicio

- DoS / DDoS
 - vender como estrés y resiliencia
- muchas peticiones, es igual el dispositivo
- buscar vulnerabilidades conocidas → SHODAN
- Vectores de ataque DoS/DDoS
 - volumen
 - UDP Flood Attack
 - ICMP Flood
 - Ping of Death → paquete medida superior al standard RFC 791 IP
 - Smurf (pitufo), usar sitios legítimos falseando la IP
 - NTP Amplification Attack
 - protocolo
 - SYN Flood
 - enviar SYN y no responder con el ACK
 - enviar SYN a saco
 - Fragmentation
 - usar recursos de destino volviendo a juntar el paquete fragmentado
 - Spoofed Session Flood Attack
 - establecer sesión SYN-ACK y no hacer nada más
 - consumir recursos
 - Aplicación
 - GET/POST
 - Multi Vector
 - Pear-to-pear
 - Permanent DoS
 - phlashing
 - ENEMA

sección 3 técnicas de detección

- Profiling
- Oleadas de ataques
- contramedidas
 - recursos y planificación
 - identificar servicios críticos
 - apagar servicios
- deflectar ataques... no (son terceras máquinas)
- mitigar ataques

- Post-ataque forense

sección 4 protección

- CDNs (apuntes)
 - diseño arquitectura distribuido
 - https://es.wikipedia.org/wiki/Red_de_distribuci%C3%B3n_de_contenidos - Qué es una CDN
 - <https://blog.templatetoaster.com/difference-between-cloudflare-and-akamai/> - Comparativa entre las dos soluciones más potentes del mercado: Akamai y Cloudflare. Spoiler: Cloudflare tiene productos gratuitos muy interesantes, cosa que no tiene Akamai.
 - <https://about.netflix.com/es/news/how-netflix-works-with-isps-around-the-globe-to-deliver-a-great-viewing-experience> - Cómo funciona la CDN de Netflix
 - <https://www.xataka.com/streaming/la-compleja-infraestructura-detras-de-netflix-que-pasa-cuando-l-e-das-al-play> - Artículo brutal sobre el funcionamiento de Netflix en 2018
 - <https://ipinfo.io/AS6752> - Sistema autónomo de Andorra
- cloudflare
 - versión gratuita - <https://www.cloudflare.com/es-es/>

extra

- Protocolo Diffie-Hellman: <https://youtu.be/vZToAM4kwjM?si=ic-75SMu28MVG6ZN>

Modulo 11 - Session Hijacking

Modulo 12 - Evadiendo IDS, cortafuegos y honeypots

Modulo 13 - Ataques a servidores web
