## Clase

### DNS

#### DNS: Laboratorio (continuación [\[\[info: cursos: pue: lpic2-2021: s8# dns laboratorio\]\]](#))

ficheros de configuración para el master del servidor DNS

[named.conf](#)

```
options {
    directory "/var/named"; %//% aunque esté enjaulado, no lo sabe...
    forwarders{
        8.8.8.8;
        8.8.4.4;
    };
    allow-transfer{
        192.168.2.152;
    };
    allow-notify {192.168.2.152;};
};

zone "." {
    type hint;
    file "named.ca";
};

zone "curso.esp"{
    type master;
    allow-update {
        192.168.2.0/24;
    };
    file "db.curso";
};

zone "2.168.192.IN-ADDR.ARPA"{
    type master;
    allow-update {
        192.168.2.0/24;
    };
    file "db.192.168.2";
};
```

```
};
```

```

[/etc/resolv.conf](#)

```
nameserver 192.168.2.5
nameserver 192.168.2.152
search curso.esp
domain curso.esp
```

- **/etc/sysconfig/network-scripts/icfg-enp0s3:**

```
PEERDNS=No
DNS1=<IP_DNS>
DNS2=<IP_DNS>
```

- para que no sobrescriba el **resolv.conf** (el DHCP o Vagrant) y mantenga los DNS que yo le diga
- dig

## DNS: Laboratorio

- DOC: Material Practicas LPIC-2/LPIC-202/1-Domain Name Server/2-Laboratorio DNS RedHat7.pdf

- ```
options {
    directory "/var/named";
    forwarders{
        8.8.8.8;
        192.168.2.1;
    };
    // allow-transfer{
    // 192.168.2.5;
    // 192.168.2.3;
    // };
```

```
//
};

zone "." {
    type hint;
    file "named.ca";
};
zone "curso.esp"{
    type slave;
    file "slaves/db.curso";
    masters { 192.168.2.5; };
};

zone "2.168.192.IN-ADDR.ARPA"{
    type slave;
    file "slaves/db.192.168.2";
    masters { 192.168.2.5; };
};
```

- [/etc/resolv.conf](#)

```
nameserver 192.168.2.5
search curso.esp
domain curso.esp
```

- cp named.ca /var/named/chroot/var/named/
- cp named.conf /var/named/chroot/etc/
- mkdir /var/named/chroot/var/named/slaves
- chmod -R 770 /var/named/chroot/var/named/slaves
- chown -R named:named /var/named/chroot/var/named/slaves
- service named restart ← centos6 sin systemctl

## DNS (continuación)

- masterfile-format:
  - indica en que formato se transfieren las zonas desde el master: text,raw,map
  - [https://fpngenred.es/DNS/estamento\\_masterfileformat.html](https://fpngenred.es/DNS/estamento_masterfileformat.html)
- dig (pag.262),nslookup,host
  - host -t NS curso.esp
- DOC: Manual Certificacion LPIC-2.pdf, pag. 254
- añadir nueva zona esclava en el master:

```
zone "nombrezona" {
    type slave;
    masters { 192.168.x.x; };
    file "db.miempresa.com";
    masterfile-format text;
};
```

- añadir a **named.conf** para que escuche en un puerto/ip determinados:

```
options {
    directory "/var/named";
```

```
listen-on port 53 { IP_escucha; };
forwarders{
  8.8.8.8;
  8.8.4.4;
};
```

## DNSSEC

- DOC: (pag. 267), (pag. 17 - laboratorio dns)
- **allow-transfer { acl };**
- **allow-query { acl };**
- **listen-on { acl };**
- **blackhole { acl };**
- **allow-notify { acl };**
- acl:

```
acl redlocal {
  192.168.0.150;
  127.0.0.1;
  192.168.2.0/24;
};
```

- valores predefinidos en la sección acl:
  - any
  - localhost
  - localnets
  - none
- ejemplo parcial **named.conf**:

```
acl redlocal {
  localnets;
};

acl yomismo {
  localhost;
};

acl parias {
  192.168.2.152;
};

options {
  directory "/var/named";
  forwarders{
    8.8.8.8;
    8.8.4.4;
  };
  allow-transfer{
    192.168.2.152;
  };
  allow-notify {192.168.2.152;};
  //allow-query { redlocal; };
  allow-query { yomismo; };
};
```

```
//blackhole { parias; };

};
```

- yomismo: no permite a un cliente resolver, con un mensaje de **REFUSED**
- parias: no responde (ni se logea) a una petición de un cliente
- redlocal: funciona correctamente
- cuenta de servicio:
  - usuario propio
  - sin shell → /sbin/nologin
  - enjaular el proceso
  - intercambio seguro entre servidores
- TSIG (Transaction SIGnature)
  - DOC: (pag. 270) (pag.9)
  - dnssec-keygen
    - **-a HMAC-MD5**: único algoritmo de cifrado soportado
    - **-b <tamaño>**: (1-512), 128 suficiente
    - **-n <propiedad>**: **HOST** para indicar que la seguridad va máquina a máquina
    - <nombreclave>

## laboratorio TSIG

- en el master:

```
dnssec-keygen -r /dev/random -a HMAC-MD5 -b 128 -n HOST curso.esp # genera
.key y .private
chmod 400 Kcurso.esp*
chown named.named Kcurso.esp*
cat Kcurso*.key # llave pública
```

- editar **named.conf** y añadir:

```
key curso.esp {
algorithm HMAC-MD5;
secret "8WaWHvdoCSNH/ZhBFWbP9w==";
};
```

- y modificar:

```
allow-transfer { key curso.esp; };
```

- systemctl restart named-chroot
- en el esclavo, **named.conf**:

```
key curso.esp {
algorithm HMAC-MD5;
secret "8WaWHvdoCSNH/ZhBFWbP9w==";
};
server 192.168.1.150 {
keys { curso.esp; };
};
```

- eliminamos las zonas transferidas (para ver que funciona) en el esclavo
- service named restart

```
Mar 2 20:26:41 sercentos7 systemd: Started Berkeley Internet Name Domain (DNS).
