

# Curso python + openpyxl (excel)

- udemy
- <https://www.udemy.com/course/python-learn-how-to-read-write-and-manipulate-excel-files/learn/lecture/8080204#overview>

## 2. Python - Working with Sheet

```
import openpyxl
import os

os.getcwd()
os.chdir(path)

wb=openpyxl.load_workbook('...xlsx')
type(wb)
wb.get_sheet_names()
```

```
sheet=wb.get_sheet_by_name('pestanya')
type(sheet)
sheet.title
sheet.max_row
sheet.max_column
sheet.title='nou nom'
sheet.save('file.xlsx')
```

```
for i in range(1, sheet.max_column+1):
    e=sheet.cell(row=1, column=i)
    print(e.value, end=' ')

lista = []
for i in range(1,5):
    e=sheet.cell(row=5, column=i)
    lista.append(e.value)
```

</code>

## 3. Reading and Writing Rows in Excel
