

Gestión paquetes

linux

- [apt-get](#)
- [repos](#)
- [dpkg](#)
- [aptitude](#)
- [yum](#)
- [ppa](#)
- [apk \(alpine\)](#)

verificar/actualizar paquete

- mirar si está en el sistema:

```
dpkg --get-selections | grep <paquete>
```

- mirar el detalle del paquete:

```
dpkg -l <paquete>
```

- actualizar paquete (no instala si no está):

```
sudo apt-get --only-upgrade install <paquete>
```

- ejecutar prueba de instalación/actualización:

```
sudo apt-get --only-upgrade install libxml2 --dry-run
```

apt-key deprecated

```
sudo apt install gnupg -y
wget -O- <https://example.com/key/repo-key.gpg> | gpg --dearmor | sudo tee
/usr/share/keyrings/<myrepository>-archive-keyring.gpg
sudo gpg --no-default-keyring --keyring /usr/share/keyrings/<myrepository>-archive-
keyring.gpg --keyserver <hkp://keyserver.ubuntu.com:80> --recv-keys <fingerprint>
```

```
deb [signed-by=/usr/share/keyrings/<myrepository>-archive-keyring.gpg]
<https://repository.example.com/debian/ stable main>
deb [arch=amd64 signed-by=/usr/share/keyrings/<myrepository>-archive-keyring.gpg]
<https://repository.example.com/debian/ stable main>
```

libc6 is not configured yet

error haciendo apt upgrade, librería no configurada, fallan dependencias (en este caso, libc6:i386)

```
sudo apt list --installed | grep libc6
```

```
sudo dpkg --configure -a
```
