

at

resumen

- `at time` → entra en el modo shell de AT para darle la lista de comandos a ejecutar
 - para salir del modo shell, `^C` → cancela, `^D` → guarda
 - permite indicar hora, días, etc... ejemplos: `10:33`, `10:33 + 2 days`, `dd.mm.yy`, `now + 3 hours`
- `atq` → lista tareas pendientes de ejecutar → `at -l` hace lo mismo
- `at -d x` → elimina la tarea x (ver previamente con `at -l`)

ejemplos horarios

At allows fairly complex time specifications, extending the POSIX.2 standard. It accepts times of the form HH:MM to run a job at a specific time of day. (If that time is already past, the next day is assumed.) You may also specify midnight, noon, or teatime (4pm) and you can have a time-of-day suffixed with AM or PM for running in the morning or the evening. You can also say what day the job will be run, by giving a date in the form month-name day with an optional year, or giving a date of the form MMDDYY or MM/DD/YY or DD.MM.YY. The specification of a date must follow the specification of the time of day. You can also give times like `now + count time-units`, where the time-units can be minutes, hours, days, or weeks and you can tell at to run the job today by suffixing the time with `today` and to run the job tomorrow by suffixing the time with `tomorrow`.

For example, to run a job at 4pm three days from now, you would do `at 4pm + 3 days`, to run a job at 10:00am on July 31, you would do `at 10am Jul 31` and to run a job at 1am tomorrow, you would do `at 1am tomorrow`.

`/usr/share/doc/at-3.1.8/timespec` contains the exact definition of the time specification.

parámetros interesantes

- `-m` → envía mensaje al finalizar ejecución
- `-f <file>` → lee los comandos del fichero en lugar de stdin
- `-c x` → lista el contenido del trabajo x

ficheros

se chequean en orden estos 2 archivos

1. `/etc/at.allow` → solo los usuarios de la lista pueden lanzar tareas AT
2. `/etc/at.deny` → los nombres no listados pueden ejecutar
