info hard

linux, bash

info del sistema

comandos para obtener información del sistema (versiones de SO o de GUI), algunos más completos (inxi)

inxi

- F : Full Output (-n -s)
- D : Full Hard Disk info
- z : filtra la salida por razones de seguridad, no mostrar información sensible
- n : Advanced Network card information
- s : información sensores
- x
- d : Información unidades ópticas
- p : full partition information
- o : Unmounted partition information
- l : partitions labels

Ejemplos:

- `inxi -Fxzd`
- `inxi -Fxzdpol`

lsb_release

- `lsb_release -a`
  - -a : all
  - -s : short
- `cat /etc/lsb-release`

uname

- `uname -a`

red

averiguamos en que posición se encuentra la tarjeta de red (comando más preciso y con más detalle podría ser `lspci -vv -s 03:00.0`) y después preguntamos por las tarjetas... en el campo BUS INFO vemos el nexo de unión entre las 2 informaciones.
