

# raspberrypi

## información

- <https://www.raspberrypi.org/documentation/>
- <http://www.vichauter.org/como-se-hace/como-conectar-montar-discos-duros-usb-la-raspberrypi>

## bash

- \$ sudo raspi-config
- \$ startx → arranca entorno gráfico
- \$ sudo reboot
- \$ cat /sys/devices/system/cpu/cpu0/cpufreq/scaling\_cur\_freq
- \$ vim /etc/config.txt
  - arm\_freq=700 # default 700, hasta 1500 (creo)
  - agp\_freq=xxx #
- temperatura:
  - \$ cat /proc/acpi/thermal\_zone/ATF0/temperature
  - \$ cat /sys/class/thermal/thermal\_zone0/temp

## reconfiguración teclado

- dpkg-reconfigure keyboard-configuration
- setupcon

## minecraft

- <http://picraftbukkit.webs.com/pi-minecraft-server-how-to>
  - no usar este server, usar el propio de minecraft, pero si instrucción de arranque
  - [https://s3.amazonaws.com/Minecraft.Download/versions/1.8.4/minecraft\\_server.1.8.4.jar](https://s3.amazonaws.com/Minecraft.Download/versions/1.8.4/minecraft_server.1.8.4.jar)

## WIFI (RASPI3)

- scan de redes wifi: sudo iwlist wlan0 scan
- configuración:
  - nano /etc/wpa\_supplicant/wpa\_supplicant.conf
  - añadir:

```
network={
    ssid="nombre_red"
    psk="wifi_password"
}
```

- debería automáticamente, al cabo de unos segundos, conectarse, pero:
  - reboot
  - sudo ifdown wlan0 y sudo ifup wlan0
- /vía: <https://www.raspberrypi.org/documentation/configuration/wireless/wireless-cli.md>

# GPIO

## Pibrella
